

Postdoctoral Research Associate: Large Scale Brain Images and Networks

NIH-funded postdoctoral positions are available for large-scale multimodal (fMRI, DTI, MRI) twin brain imaging studies between 2017-2019 at the University of Wisconsin-Madison. The postdoctoral fellow will work under professor Moo K. Chung (www.stat.wisc.edu/~mchung) on developing innovative statistical and machine learning methods in analyzing brain images and networks.

Candidates should have received or expected to receive PhD degree or equivalent in mathematics, CS, EE, statistics, medical physics, biomedical engineering, psychology, neuroscience or related areas. Previous neuroimaging research experience is a plus but not necessary. Interested candidates should email CV (with the name of references) and a representative paper to Moo K. Chung (mkchung@wisc.edu).
